Protocol Overview

Attention deficit hyperactivity disorder, also known as ADD or ADHD, is a brain based disorder that is most common in childhood. If left untreated, ADD or ADHS can sometimes carry into adolescence and adulthood. A child with ADD or ADHD will display symptoms such as; impulsive behavior, difficulty paying attention and staying focused to age appropriate activities, and hyperactive behaviors. Attention Deficit Hyperactivity Disorder is the result of a chemical imbalance in the brain and is not an emotional disorder.

This Wellness Protocol brings together the traditional herbs, vitamins and minerals of our individual formulations to reduce the symptoms of ADD and ADHD as well as supporting proper brain functioning.

Brilliance is a combination of several herbs, including Gotu Kola and Ginkgo Biloba. Gotu Kola is a mild relaxant and provides mental clarity. Ginkgo Biloba stimulates the blood flow to the brain and promotes healthy memory function.

pH OxyPlus helps to deliver oxygen to the brain, further improving brain function. pH OxyPlus also helps to balance out the cellular pH levels, further enhancing health and well-being.

Micronized Mag/Cal in 7:5 Ratio is a blend of Magnesium and Calcium, which when combined, are a natural tranquilizer and will offer a calming effect on the body. Many people are deficient in Mag/Cal, therefore a high dose is recommended. No known toxicity level exists.

Quint-Essence contains many vitamins and minerals necessary for healthy body and brain function. The B Vitamins in Quint-Essence, particularly Vitamin B12, are essential to gain control of symptoms such as difficulty focusing and memory loss.

Tracite contains 77 essential mineral and trace elements. Tracite helps deliver the oxygen to the brain cells, further improving mental clarity. Tracite also enhancing the absorption rates of all nutrients put into the body.

Note: Additional information for the above products is included in the subsequent datasheets.
